EDUCATION

- G H Raison College Of Engineering** Pune, India
Bachelor of Technology - Computer Science and Engineering; GPA: 8.50 Aug 2022 - July 2025
Courses: Data Structures & Algorithms, Operating Systems, Databases, Computer Networks, Machine Learning, Artificial Intelligence

SKILLS SUMMARY

- Languages:** Java, JavaScript, TypeScript, Python, C++, SQL
- Frontend:** React, Next.js, Tailwind CSS, shadcn/ui
- Backend:** Node.js, NestJS, TypeORM, REST APIs, tRPC, WebSockets
- Databases:** PostgreSQL, MySQL, MongoDB
- DevOps & Cloud:** Docker, AWS (EC2, Nginx), Azure, Git, CI/CD, Linux
- Practices:** Agile/Scrum, Code Review, RBAC, Unit & Integration Testing, System Design

EXPERIENCE

- Mettarev** Hybrid
Software Developer (Full-time) May 2026 – Present
 - Feature Delivery:** Engineered and shipped features across a 51-module, multi-tenant white-label FinTech platform (React, TypeScript, NestJS, PostgreSQL) with a partner-code-driven architecture supporting runtime tenant configuration.
 - Backend & REST APIs:** Designed and maintained a 370-endpoint REST API (49 NestJS controllers) over an 82-table PostgreSQL schema, enforcing role-based access via a CASL policy model (9 actions, DB-backed role mapping) across 400+ guard checkpoints.
 - Data Integrity & Reliability:** Guaranteed transactional consistency across financial flows using 300+ managed DB transactions and 15 composite unique constraints for insert-level idempotency, plus a 10-minute email deduplication window that eliminated duplicate transactional notifications.
 - Operational Automation:** Automated recurring operations with 10 production cron jobs (daily 6:30 AM AEST settlement, bank sync, monthly fund reconciliation) and integrated DocuSign, SendGrid, and Puppeteer, driving 35 Handlebars PDF and 47 MJML email templates that replaced manual document workflows.
- Mettarev** Hybrid
Software Developer (Intern) Feb 2026 – Apr 2026
 - Application Development:** Built features and RESTful APIs for a multi-tenant FinTech platform (React, TypeScript, NestJS, TypeORM, PostgreSQL), delivering client, policy, and financial modules with production bug fixes.
 - Full-Stack Enhancements:** Engineered reusable React components with validation, pagination, filtering, and role-based access control, improving module performance and usability.
- SmartTech Solutions** Remote
Software Development Intern Jan 2025 – Jun 2025
 - Full-Stack Web Application:** Built and deployed a full MERN-stack e-commerce application, improving UI responsiveness and reducing average page load time by **30%**.
 - Secure Authentication:** Implemented JWT and bcrypt-based authentication and authorization, strengthening platform security and session handling.
 - RESTful APIs:** Designed REST APIs for product management, cart operations, and user interactions, ensuring reliable frontend-backend communication.

PROJECTS

- MeetAI – AI-powered Video Meeting Platform:** (*Next.js 15, TypeScript, React, Tailwind CSS, shadcn/ui, tRPC, PostgreSQL*)
 - Built an AI-driven video meeting platform enabling users to create agents and host real-time meetings with automated in-call assistance.
 - Implemented full CRUD modules for agents and meetings with filtering, search, pagination, role-based access, and form validation.
 - Integrated OpenAI and Gemini APIs for real-time speech, responses, and automation inside live video calls.
 - Developed webhook-based automation for session lifecycle events (agents auto-join and interact), and optimized performance via server-client hydration and React Query caching.
- FilePeer – Secure P2P File Sharing Platform:** (*Java, Maven, REST API, Socket Programming, Next.js, TypeScript, AWS EC2, Nginx, Vercel*)
 - Built a peer-to-peer file sharing platform for secure real-time transfers without intermediary cloud storage, powered by a custom Java backend using socket programming and REST APIs.
 - Deployed the backend on AWS EC2 behind an Nginx reverse proxy and hosted the frontend on Vercel for scalable routing.
 - Implemented invite-based sharing with temporary port allocation for secure, one-time file access.
- Predictive Analysis for Multiple Diseases:** (*Python, pandas, NumPy, scikit-learn, Streamlit, matplotlib, UCI datasets*)
 - Built an ML system predicting diabetes, heart disease, and Parkinson's using Logistic Regression, Random Forest, and SVM (85% accuracy), with feature selection and an interactive Streamlit dashboard for real-time predictions.
